# NEWS RELEASE

#2005-6

TSX Venture: KLM

- **Kermode intersects 31.9 m grading 1.13 g/t gold at Jackson's Arm**

**Kermode Resources Ltd.** is pleased to update the Phase 3 Jackson's Arm drill program now in progress. Nine drillholes totaling 1,950 m have been completed to date in a planned twenty drillhole program expected to total about 4,000m.

Partial analytical results have been received for several holes. The best results to date are from drillhole JA-05-26 testing the Apsy granite in an area of previously known mineralization at a different drillhole azimuth than the majority of the previous drillholes.

Selected results from this drillhole, which contained anomalous gold throughout the 87 metre interval from 23.6 to 110.6 metres, are as follows:

From (m)	To (m)	Core Length (m)	Gold g/t
10.3	11.3	1.0	1.21
25.6	27.6	2.0	1.04
34.3	36.3	2.0	1.19
40.3	43.3	3.0	1.41
51.1	52.3	1.1	1.54
63.1	95.0	31.9	1.13
Includes			
63.1	74.0	10.9	1.92
and			
83.6	95.0	11.4	1.05
103.5	108.0	4.5	1.35

Kermode is awaiting further assay results from the completed nine holes and is continuing to drill , testing for both high-grade and bulk tonnage targets.

The Jackson's Arm drilling program is supervised by Consulting Geologist James Harris P.Geo. Qualified Person under National Instrument 43-101 guidelines. Lantech Drilling Services are conducting the drilling. Assay samples are taken from drillcore (thinwall BQ size) sawed in half using a diamond saw blade. One-half the core is preserved in core boxes for future reference. The samples, comprising the other half of the drillcore are bagged, sealed and delivered directly to the analytical laboratory under the supervision of Mr. Harris.

Samples were processed and analyzed at Eastern Analytical Ltd., an assay laboratory based in Springdale, Newfoundland. Samples were crushed with a jaw crusher to 75% passing 10 mesh and split with a riffle splitter to approximately 250 grams. This sample is then pulverized to 95% passing 150 mesh and analyzed for gold utilizing a half assay ton, fire assay technique plus ICP-11. As part of the quality control program implemented, Eastern Analytical will send a pulp of 1 in 10 samples to Acme labs for ICP-MS. All analytical pulps and rejects are retrieved by Kermode and retained.
